Art Unit: 2834

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 49 and 50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kida. Kida teaches providing a piezoelectric PZT material (see column 2, wind 66- column 3, wind 30) that includes Si in an amount less than 100ppm (see column 2, line 29 - 58) in order to increase strength. It is indicated that the Si becomes present at the grain boundaries in this amount. Kida does not explicitly teach that the piezoelectric material is used in multilayered devices, however, multilayered piezoelectric devices such as transformers, bimorph elements and stack actuators routinely use multiple layers of piezoelectric elements in order to increase the mechanical output as well as to lower the input impedance. Thus, for at least these reasons, it would have been obvious to one of ordinary skill in the art that the ceramic of Kida could be used in multilayered piezoelectric devices.
